Facility Name: The Coleman Company, Inc. – Factories A and B

Facility Location: 250 N. St. Francis, Wichita, KS 64201

The proposed action is to reissue an existing permit for an existing groundwater remediation project. This is a previous manufacturing site, which was identified by Bureau of Environmental Remediation (BER) to have groundwater contaminated with volatile organic compounds (VOC). Since 1991, this facility has been engaged in ongoing remediation efforts including groundwater extraction and treatment. Urban redevelopment of the site has resulted in demolition of a majority of the old factory buildings, which have been replaced with an office building and two parking lots. Groundwater extraction for the western half of the site (Factory A) is pumped from two wells and treated with an air stripper prior to discharge. Groundwater extraction for the eastern half of the site (Factory B) is pumped from one well and treated with an air stripper prior to discharge. The proposed permit contains limits for trichloroethylene, tetrachloroethylene, and pH, as well as monitoring for total nitrogen, radioactivity, volatile organic chemicals, and flow.

Facility Name: East Kansas Agri-Energy, LLC – Ethanol and Renewable Diesel Plant

This action consists of a minor modification and reissuance of an existing NPDES/ Kansas Water Pollution Control permit for an existing facility. The modification includes the addition of a non-petroleum based renewable diesel and renewable gasoline feedstock production facility adjacent to the existing grain fermentation based ethanol production facility. The updated facility includes both a grain fermentation-based ethanol production facility and an adjacent non-petroleum based renewable diesel production facility. The ethanol facility dry grinds corn and sorghum, adds water to form slurry, and cooks slurry, to manufacture ethanol by natural fermentation. The resulting products include about 50 million gallons per year of fuel grade 200 proof denatured ethanol, animal feed, and CO₂. Ethanol is blended with gasoline to yield oxygenated gasoline. The residual mash (Stillage) is centrifuged and the centrifuged solids dried to produce different grades of feed. The centrifuged liquids or thin stillage is evaporated and centrifuged to produce about 3 million gallons per year of corn oil. The corn oil and other received non-petroleum fats, oils and greases is used to produce renewable diesel and renewable gasoline blend stock. About 290 gpm of Garnett Publicly Owned Treatment Works (POTW) effluent and Lake Garnett water is chlorinated, filtered through multimedia filters, and two equalization tanks prior to use in the renewable diesel facility's compressor cooling, mixed with the diesel facility's reverse osmosis and softener reject flows and then routed to the cooling towers. About 26 gpm of city potable water is treated in a reverse osmosis unit and water softener for boiler feed. About 97 gpm of cooling tower blowdown, 6.5 gpm of ethanol facility RO reject, and 0.28 gpm of softener regenerate are discharged to surface waters through an earthen polishing pond. All other terms, conditions and provisions of the permit remain in full force and effect.
