Notice of Application to Expand a Construction and Demolition Landfill

The Kansas Department of Health and Environment (KDHE) has received an application to expand the Robison Environmental Services, LLC construction and demolition (C&D) landfill, Permit 900, to include an adjacent disposal-without-a-permit (DWOP) area. The DWOP authorization's disposal area was used to dispose wastes generated by the April 27, 2014 tornado that struck Baxter Springs, Kansas and Quapaw, Oklahoma. Incorporating the DWOP area into Permit 900 was a condition of the DWOP authorization.

The C&D landfill is located at 2801 State Line Road, immediately northwest of the intersection of State Line Road and Swalley Avenue. The permit modification will expand the landfill area from 18.31 to 41.41 acres with 13.41 acres used for disposal, increasing the landfill's ultimate disposal volume to 535,000 cubic yards. The proposed landfill expansion would be operated in conformance with state solid waste regulations accepting only C&D as defined by Kansas Statutes.

The Cherokee County Commissioners have certified that the application described herein is consistent with the county's solid waste management plan and local land use restrictions or zoning. KDHE has reviewed the application and found it to be in conformance with the state solid waste statutes and regulations.

KDHE is today providing public notice of the intent to approve the proposed C&D landfill expansion. However, a final decision to approve the expansion has not been made, and KDHE will consider information gathered during the public comment period before making a final decision. A copy of the administrative record which includes the permit application, engineering drawings, draft permit, and other information with respect to this permit action will be available for public review from July 5, 2019 through August 6, 2019 during normal business hours at the following locations:

Mailed comments postmarked on or prior to August 6, 2019 and received within one week thereafter will also be considered.

Facility Name: Well Number 9 Granulated Activated Carbon Treatment System

The proposed action is to issue a new State/NPDES permit to a previously established facility. This is an existing public water supply. Well water from Well #9 is treated with two Granulated Activated Carbon (GAC) units operated in series, which has a treatment capacity of 475 gallons per minute. Once every three months, these units are backwashed, producing a discharge of approximately 658 gallons per day. This discharge is treated with a bag filter and discharges to a ditch on the north end of the GAC building. The proposed permit contains limits for total residual chlorine, total suspended solids and pH, as well as monitoring for phosphorus and flow. While this plant has been in existence for several years, it did not have an NPDES permit.
